EDUCATION

University of Maryland Baltimore County (UMBC)

Bachelor of Science, Computer Science — 3.90 GPA (Dean's List)

Baltimore, MD

Jan 2024 - Dec 2025

Community College of Baltimore County (CCBC)

Associate of Science, Computer Science — 3.86 GPA (Dean's List)

Catonsville, MD

Aug 2020 - May 2023

Experience

Teaching Assistant — Social & Ethical Issues in IT

UMBC | Aug 2025 – Dec 2025

- Led weekly discussion sections for a 60-student course, facilitating structured conversations on data privacy, cybersecurity ethics, intellectual property, and digital rights
- Managed grading and academic support for ~30 students using Blackboard, evaluating essays, case analyses, and research projects
- Delivered detailed, actionable feedback that helped students improve assignment quality and achieve higher subsequent grades
- Collaborated with the instructor and co-TA to standardize grading criteria, ensuring consistency and fairness across evaluations

Technical/Cybersecurity Intern

Technuf | July 2025 – Aug 2025

- Developed a bi-directional MCP Server for Wazuh, automating 100% of alert forwarding to Splunk and Elasticsearch via async REST/Webhook connectors.
- Built a FastAPI-based inbound adapter ingesting third-party CTI feeds, synchronizing IOCs into Wazuh manager in real time (sub-2s latency).
- Engineered an outbound connector with exponential backoff retry logic, ensuring data integrity across schema transformations for 2 SIEM platforms.
- Designed a configuration dashboard UI (credential management + schema mapping) with mock-ups adhering to Wazuh design standards.
- Wrote 30+ integration tests (Pytest) and authored a 17-page technical manual covering architecture diagrams, API contracts (Swagger), and deployment steps.

Academic Projects

Snakes and Ladders Game Engine

- Developed a C++ game engine using a **linked list** to represent the game board.
- Implemented game logic for player movement, ladders, and snakes.
- Managed **dynamic memory** to prevent leaks and errors.
- Created functions for default and random board generation.
- Achieved **100% memory leak-free** execution verified by **Valgrind** across **50+ test runs**

Assembly Language String Manipulation Program

- Developed a menu-driven **x86_64** Assembly app for string manipulation with **input validation** and **transformations**.
- Managed an array of **10 initial strings**, allowing users to **update** and **transform messages**.
- Implemented C functions for input and **assembly subroutines** for string operations like **reversing**, **scrambling**.
- Ensured robust **error handling** and conducted **incremental testing** for a reliable user experience.

Skills & Coursework

Languages: Python, C++, Java, HTML, CSS, JavaScript, SQL

Frameworks and Tools: React, Flask, Git, GitHub, Jira, VS Code, Agile (Scrum)

Relevant Courses: Software Engineering, Computer Architecture, Operating Systems, Database Management Systems, Artificial Intelligence, Computer Security, Data Structures and Algorithms, Machine Learning

Awards & Certifications

Jack Kent Cooke Foundation Scholarship

Awarded a highly competitive scholarship

Google Cybersecurity Professional Certificate V2

Coursera - August 2025

Intermediate Web Development

Codepath - August 2025

Introduction to Post-Quantum Cryptography

edX - June 2025

Introduction to Web Development

Codepath - May 2024
